CASE-004 | FORENSIC CHEMISTRY

Laboratory Analysis Report - Seized Packets

Lab ref. FCL-2026-0331 | Received 13 Mar 2026 09:00 | Reported 16 Mar 2026

ITEMS	11 sealed packets stamped with an indigo crescent (Warehouse 03) + 1 opened packet (hospital patient)
NET WEIGHT	1,904 g (warehouse); 0.6 g (hospital)
RESULT	Crystalline methamphetamine hydrochloride with a blue tint
PURITY	96.1 % (warehouse); 95.8 % (hospital) - same profile
COMPARISON	Impurity profile of both samples is the same: same production batch

Interpretation

Purity this high is unusual for street supply and indicates a skilled producer with access to laboratory equipment. The hospital packet comes from the same batch as the packets recovered at Warehouse 03.

Two latent fingerprints were lifted from the inner wrapping of packet 7. One was matched to Anmol Pinky (records from a 2024 event-licence application). The second is unidentified and has been queued for comparison.

FICTIONAL TRAINING DOCUMENT - created for the TRACE X academic project.
